## DEWA - Dubai Electricity and Water Authority

(dataviz - UX / UI design)

### Challenge:

Monitor and visualise all the electrical assets in Dubai. Be able to proactively understand where and when the electrical failures would happen.

### Process:

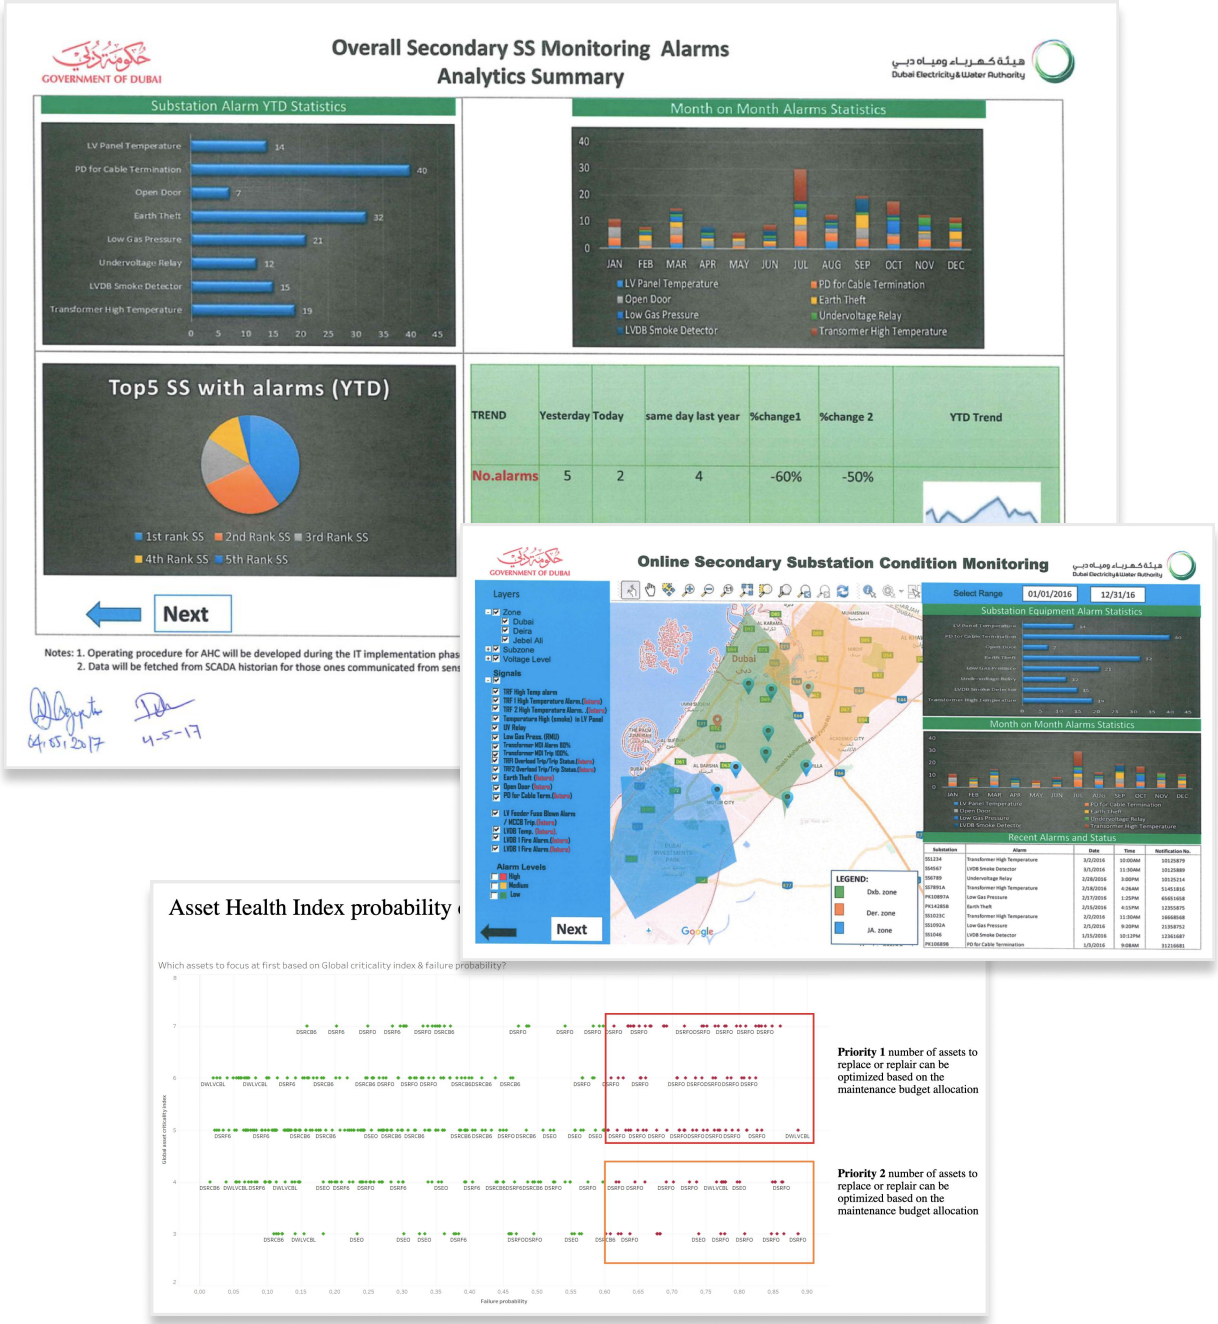

Working very closely with the main contact at Dubai, we took all their already existing dashboards and created a P.O.C. of what could be the future of the new dashboard.

### Outcome:

The vision was really well received and became one of the main concept that was showed as a marketing material for several prospective clients.

Requirements and assets from the client as well as UIs of their existing dashboards

Simplification of the user flow and their dashboards by using all the different existing datasets and coming up with more user friendly data visualisations.
