Challenge:

Designing a Chrome extension for L1 support required simplifying complex diagnostics into an intuitive, accessible interface while retaining essential functionality for effective issue resolution.

Process:

User research informed a streamlined design with guided troubleshooting, focusing on usability. Prototypes were tested and refined with L1 support teams to ensure clarity and efficiency.

Outcome:

The Chrome extension enabled L1 support to resolve issues more efficiently, reducing escalations and boosting confidence. Six months post-launch, as of May 2024, it generated \$801K in value and gained 5.2K active users, significantly improving resolution times and overall productivity.
