Teradata Vantage - data analytics platform

(end to end product design)

Challenge:

Teradata does not provide an optimal developer experience. Currently, the experience is fragmented and slows down the process of building with Teradata.

Process:

We must reimagine the Developer Experience (DX) by providing a variety of developers with a modern and easy platform to integrate, build, test, share and deploy.

Outcome:

A full Hybrid Data analytics and [user-friendly B2B platform](#) suited and approved by multiple personas.

Workshop | Research | interview during the discovery/empathise phase

4 main personas for the phase 1 of the product focused on "doers" (technical skills)

Persona 1: Cynthia Shirah

Cynthia Shirah
Data Analyst

Traits + Background:
Cynthia has 20 years of experience in engineering and loves her current role. She also loves to create clean, smart code, which usually doesn't include any and drop code. She is patient, hard-working, detail oriented, and passionate about her job.

Motivations:
Cynthia is passionate about finding themes which lead to insights, which leads to problems being solved faster.

What is Cynthia trying to do? Why?
Cynthia needs to get to her data quickly and easily.

What obstacles/pain points prevent this?
• Too many tools
• Difficulty to get to all data sources without Python
• Too many steps to the process

"I love my role but it's beyond painful when I have to spend all my time on extraction"
-Cynthia Shirah

Persona 2: Brandon Quach

Brandon Quach
Data Scientist

Traits + Background:
Brandon is in a newer role at Teradata. He is smart, articulate, quick, analytical and precise.

Motivations:
Brandon likes to work quickly and problem solve. He is passionate about workflow process improvement and collaboration. He learns from user feedback and believes to have good customer relationships.

What is Brandon trying to do? Why?
Brandon supports customer service in his org. He usually would recommend knowledge articles in an automated way and accurate way. He also would like to develop a recommendation engine.

What obstacles/pain points prevent this?
• Lack of feedback from customer
• Service how is difficult to use
• Ticket logging is not accurate

"Many things exist that I don't know about"
-Brandon Quach

Persona 3: Yassin Nachite

Yassin Nachite
API Engineer

Traits + Background:
Yassin is a senior software engineer, experienced with 20M development environment and single sign-on functionality. He is detail oriented, efficient, and organized.

Motivations:
Yassin is passionate about code output to solve connected services integration across Teradata software components.

What is Yassin trying to do? Why?
Yassin aims to write a common API library to be used for shared services that query and report system performance and health.

What obstacles/pain points prevent this?
• Yassin spends 90% of time building and fixing things for devp issues

"The majority of my time is spent fixing things"
-Yassin Nachite

Persona 4: Tim Harris

Tim Harris
Software Architect

Traits + Background:
Tim has been with Teradata for a long time and has seen a lot of changes. He is reluctant of the current state of direction.

Motivations:
Tim feels good about the products and services that get into customer hands. He is slightly concerned that Teradata is little too late to some customer impressions.

What is Tim trying to do? Why?
Tim is trying to figure out and reshape the direction the company is going in, create things that will get into the customer's Education/learning experience.

What obstacles/pain points prevent this?
• Using existing APIs
• People not finding published documentation and resources

"Use and extend existing tools and APIs before creating new ones"
-Tim Harris
