

SAAS - Cloud application

◀ BACK to all case studies

Sharktower - phase 1

(end to end product design)

Challenge:

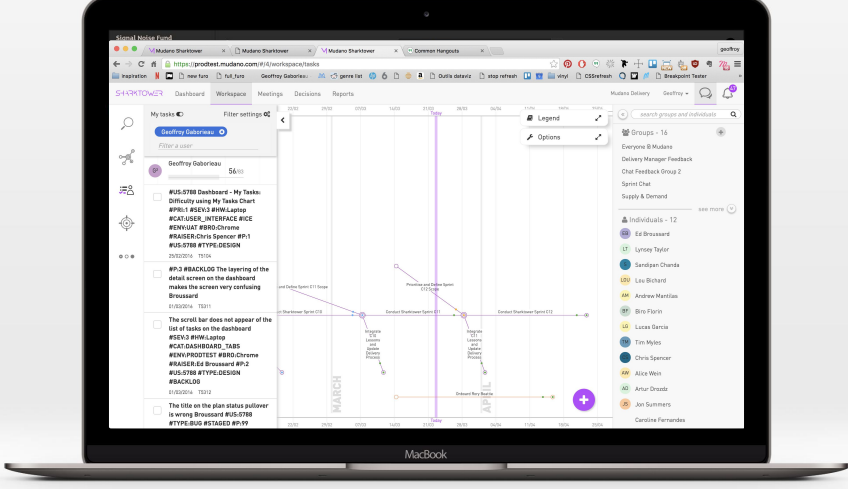

Design the whole user journey of an already working product with hundreds of users without disrupting the experience too much, and add features to make it a full fledged delivery management platform.

Process:

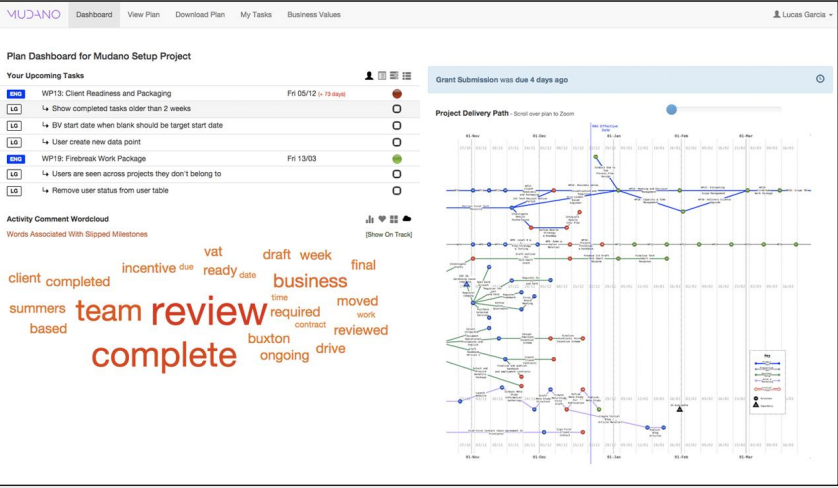

With the product manager and the dev team, we used the agile method of working by implementing sprint after sprint and improving the customer experience feature by feature.

Outcome:

Sharktower has now become a fully functioning AI driven delivery management platform and a company of its own with a dedicated team. The product itself has been completely reshaped and [evolved into phase 2](#) which is now AI driven.

Original **state of the platform** when I joined

Complex and **feature heavy** product
